## Qlipr® the most sustainable clamping system

*Higher labour efficiency and less waste costs*

**Qlipr® can be used for various crops to improve efficiency; and in all types of greenhouses ranging from low tech to urban farming.**

Qlipr® is so user friendly that everyone can work with it; the plant no longer needs to twist and as a result the vines hang to one side which increases the harvesting speed. Also, as no plastic string and clips are used, the cutting of the leaves will be without problems.

Qlipr® enables you to fasten and lower the plants in one go as well as removing shoots and pruning the flowers.

***The Qlipr® System: Less damage, More light and Higher profits***
